SUPERVISORY PATENT EXAMINER **GROUP 3700**

Continuation of 11. does NOT place the application in condition for allowance because: Examiner disagrees with the applicant's arguments. All current rejections stand. Applicant argues that Kieffer and Yabe et al. do not disclose a cover disposed on an otoscope only when the otoscope is not in use. The covers of Kieffer and Yabe et al. both clearly function to protect the endoscope both while it is not in use as well as when it is in use. If the prior art structure is capable of performing the intended use, then it meets the claim. In response to applicant's argument that Kieffer is nonanalogous art, Kieffer teaches of a cover 41 used with an otoscope 20, which is identical to the applicant's endeavor, being in a field of medicine related to internal anatomical cavities, some of which may include internal organs and tissues. An otoscope is an instrument for examining the interior of the ear (i.e. the ear canal), especially the eardrum, consisting essentially of a magnifying lens and a light. Thus, an otoscope is in fact an endoscope by definition and is analogous art.
